Hexokinase 1 Human, His-tagged, Recombinant, E.coli

产品货号: TP02441

第三版

别名: Hexokinase type I, Brain form hexokinase

描述: Hexokinase is the first enzyme in the glycolytic pathway, catalyzing the transfer of a phosphoryl group from ATP to glucose to form glucose-6-phosphate and ADP. In mammals, four distinct enzymes-types 1 to 4 hexokinases-have been identified. The enzyme is found in most cells, but there is tissue specificity for the particular type of hexokinase. Hexokinase1 is found in the adipose tissue and liver and encodes a ubiquitous form of hexokinase which localizes to the outer membrane of mitochondria

配方: Liquid. In 20 mM Tris-HCl buffer (pH 8.0) containing 10% glycerol
