KRT8, 1-483aa, Human His tag, E.coli

产品货号: TP02770

第三版

别名:Keratin, type II cytoskeletal 8, keratin 8, CARD2, CK-8, CK8, CYK8, K2C8, K8, KO

描述:KRT8 is a member of the type II keratin family clustered on the long arm of chromosome 12. Type I and type II keratins heteropolymerize to form intermediate-sized filaments in the cytoplasm of epithelial cells. KRT8 typically dimerizes with keratin 18 to form an intermediate filament in simple single-layered epithelial cells. This protein plays a role in maintaining cellular structural integrity and also functions in signal transduction and cellular differentiation. Mutations in this gene cause cryptogenic cirrhosis. Recombinant human KRT8 protein, fused to His-tag at N-terminus, was expressed in E.coli.
