产品货号: TP03091

第三版

别名:Sialic acid synthase, SAS, N acetylneuraminate synthase

描述:NANS, also known as SAS, is a 359 amino acid protein that contains one AFP (antifreeze proteins)- like domain and functions in the biosynthesis of sialic acids. Expressed ubiquitously, NANS enzymatically catalyzes the H₂O-dependent formation of N-acetylneurameric acid (Neu5Ac) and 2-keto-3-deoxy-D-glycero-D-galactonononic acid (KDN), both of which are sialic acids. NANS uses N-acetylmannosamine 6-phosphate as a substrate for Neu5Ac synthesis and mannose 6-phosphate as a substrate for KDN synthesis.
