别名:Uracil phosphoribosyltransferase homolog, Uracil phosphoribosyltransferase (FUR1) homolog (*S.cerevisiae*), FUR1, RP11-311P8.3, UPP

描述:UPRT is a uracil phosphoribosyltransferase, which catalyzes the conversion of uracil and 5-phosphoribosyl-1-R-diphosphate to uridine monophosphate (UMP). This reaction is an important part of nucleotide metabolism, specifically the pyrimidine salvage pathway. The enzyme localizes to the nucleus and cytoplasm. The protein is a potential target for rational design of drugs to treat parasitic infections and cancer. Recombinant human UPRT protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.
