Recombinant Mouse Fibroblast Growth Factor 17/FGF-17 Protein(C-6His)

产品货号: TP05268

第三版

别名:Fibroblast growth factor 17; FGF-17;fgf17

描述:FGF-17 is a member of the fibroblast growth factor (FGF) family. FGFs share 30-70% amino acid (aa) identity in a conserved, approximately 120 amino acid core domain. FGFs play multiple roles in biological functions, including angiogenesis, mitogenesis, cell differentiation and wound repair. FGF17 plays an important role in the regulation of embryonic development and as signaling molecule in the induction and patterning of the embryonic brain. It is also expressed in hindgut, parts of the developing skeleton, tail bud, major arteries, and heart. In many of these areas, it is expressed along with FGF-8, but slightly later. It is required for normal brain development.

配方:PBS

分子量:23.7 kDa

序列:Thr23-Thr216

纯度:> 95% by HPLC

浓度:

内毒素:<1.0 EU per 1 ug of protein (determined by LAL method)

存储: +4 ° C 保存 (1-2 周). 长期保存在 -20 ° C 或者 -70 ° C. 避免反复冻融.
