Recombinant Mouse Interleukin-13/IL-13 Protein(C-6His)

产品货号: TP05822

第三版

别名: Interleukin-13; IL-13; T-Cell Activation Protein P600; II13; II-13

描述: Mouse interleukin 13 (mIL-13) is a pleiotropic cytokine produced by activated Th2 cells. IL-13 induces B cell proliferation and immunoglobulin production. It contains a four helical bundle with two internal disulfide bonds. Mouse IL13 shares 58% sequence identity with human protein and exhibits cross-species activity. IL13 signals via receptor IL13R (type2, IL4R) and activates STAT-6. IL13 initially binds IL-13R₁ with low affinity and triggers association of IL4R, generating a high affinity heterodimeric receptor IL13R and eliciting downstream signals. IL13 also binds IL-13R₂ with high affinity, which plays a role in a negative feedback system of IL13 signaling. IL13 is an important mediator of allergic inflammation and disease.
