

Anti-Human/Mouse/Rat GORAB Polyclonal Antibody**Polyclonal Antibody****Cat.NO.: PA02345**

3th Edition

Description: This gene encodes a member of the golgin family, a group of coiled-coil proteins localized to the Golgi. The encoded protein may function in the secretory pathway. The encoded protein, which also localizes to the cytoplasm, was identified by interactions with the N-terminal kinase-like protein, and thus it may function in mitosis. Mutations in this gene have been associated with geroderma osteodysplastica. Alternatively spliced transcript variants have been described. GORAB (Golgin, RAB6 Interacting) is a Protein Coding gene. Diseases associated with GORAB include Geroderma Osteodysplasticum and Geroderma Osteodysplastica. Among its related pathways are DNA Damage Response.

Antigen: Synthesized peptide derived from the N-terminal region of human SCYL1BP1.

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
