

Anti-Human /Mouse BUD23 Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA02963

3th Edition

Description: This gene encodes a protein containing a nuclear localization signal and an S-adenosyl-L-methionine binding motif typical of methyltransferases, suggesting that the encoded protein may act on DNA methylation. This gene is deleted in Williams syndrome, a multisystem developmental disorder caused by the deletion of contiguous genes at 7q11.23. Alternatively spliced transcript variants have been found.

Antigen: Synthetic peptide of human WBSCR22

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity: Strongly expressed in heart, skeletal muscle and kidney. Also expressed in spleen, liver, lung and testis.
