

Anti-Human/Mouse/Rat MAEA Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA03741

3th Edition

Description: This gene encodes a protein that mediates the attachment of erythroblasts to macrophages. This attachment promotes terminal maturation and enucleation of erythroblasts, presumably by suppressing apoptosis. The encoded protein is an integral membrane protein with the N-terminus on the extracellular side and the C-terminus on the cytoplasmic side of the cell. Alternative splicing results in multiple transcript variants. MAEA (Macrophage Erythroblast Attacher) is a Protein Coding gene. Diseases associated with MAEA include Epiglottitis Neoplasm and Chronic Frontal Sinusitis. GO annotations related to this gene include actin binding.

Antigen: Synthesized peptide derived from the Internal region of human Emp

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity: Ubiquitous.
