

Anti-Human/Mouse/Rat IK Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA04603

3th Edition

Description:The protein encoded by this gene was identified by its RED repeat, a stretch of repeated arginine, glutamic acid and aspartic acid residues. The protein localizes to discrete dots within the nucleus, excluding the nucleolus. Its function is unknown. This gene maps to chromosome 5; however, a pseudogene may exist on chromosome 2. IK (IK Cytokine, Down-Regulator Of HLA II) is a Protein Coding gene. GO annotations related to this gene include identical protein binding.

Antigen:Synthesized peptide derived from the C-terminal region of human IK

Form:

How to use:1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution:PBS (pH7.4) containing 1% BSA

Application:This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:Ubiquitous.
