

Anti-Human/Mouse/Rat DDT Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA04763

3th Edition

Description:DDT (D-Dopachrome Tautomerase) is a Protein Coding gene. Diseases associated with DDT include Disuse Amblyopia. GO annotations related to this gene include dopachrome isomerase activity and D-dopachrome decarboxylase activity. An important paralog of this gene is DDTL.D-dopachrome tautomerase converts D-dopachrome into 5,6-dihydroxyindole. The DDT gene is related to the migration inhibitory factor (MIF) in terms of sequence, enzyme activity, and gene structure. DDT and MIF are closely linked on chromosome 22.

Antigen:Synthetic peptide from human protein

Form:

How to use:1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution:PBS (pH7.4) containing 1% BSA

Application:This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
