

Anti-Human/Mouse/Rat SLC22A6 Polyclonal Antibody**Polyclonal Antibody****Cat.NO.: PA05220**

3th Edition

Description: SLC22A6 (Solute Carrier Family 22 Member 6) is a Protein Coding gene. Diseases associated with SLC22A6 include N-Acetylglutamate Synthase Deficiency. Among its related pathways are Transport of glucose and other sugars, bile salts and organic acids, metal ions and amine compounds and Methotrexate Pathway, Pharmacokinetics. GO annotations related to this gene include protein homodimerization activity and ion transmembrane transporter activity. An important paralog of this gene is SLC22A8. The protein encoded by this gene is involved in the sodium-dependent transport and excretion of organic anions, some of which are potentially toxic. The encoded protein is an integral membrane protein and may be localized to the basolateral membrane. Four transcript variants encoding four different isoforms have been found for this gene.

Antigen: Synthesized peptide derived from human OAT1 Polyclonal

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
