

Anti-Human NTPCR Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA05323

3th Edition

Description:The protein encoded by this gene is a non-specific nucleoside triphosphatase that is slow-acting in vitro. This gene is overexpressed in many tumor tissues, and while it is not essential for the cell, overexpression is cytotoxic. However, the cytotoxicity is not related to its triphosphatase activity. NTPCR (Nucleoside-Triphosphatase, Cancer-Related) is a Protein Coding gene. Among its related pathways are Thiamine metabolism and superpathway of pyrimidine deoxyribonucleotides de novo biosynthesis. GO annotations related to this gene include poly(A) RNA binding and nucleoside-triphosphatase activity.

Antigen:Synthesized peptide derived from the C-terminal region of human NTPase

Form:

How to use:1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution:PBS (pH7.4) containing 1% BSA

Application:This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
