

Anti-Human RABL2A Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA05675

3th Edition

Description: This gene is a member of the RAB gene family which belongs to the RAS GTPase superfamily. The proteins in the family of RAS-related signaling molecules are small GTP-binding proteins that play important roles in the regulation of exocytotic and endocytotic pathways. This gene maps to the site of an ancestral telomere fusion event and may be a subtelomeric gene. Alternative splicing results in multiple transcript variants encoding different isoforms. RABL2A (RAB, Member Of RAS Oncogene Family Like 2A) is a Protein Coding gene. GO annotations related to this gene include GTP binding and GTPase activity. An important paralog of this gene is RABL2B.

Antigen: Synthesized peptide derived from the C-terminal region of human Rab L2A

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
