

Anti-Human CHML Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA05731

3th Edition

Description:The product of the CHML gene supports geranylgeranylation of most Rab proteins and may substitute for REP-1 in tissues other than retina. CHML is localized close to the gene for Usher syndrome type II. CHML (CHM Like, Rab Escort Protein 2) is a Protein Coding gene. Diseases associated with CHML include Choroideremia. Among its related pathways are Vesicle-mediated transport and RAB geranylgeranylation. GO annotations related to this gene include GTPase activator activity and Rab geranylgeranyltransferase activity. An important paralog of this gene is CHM.

Antigen:Synthesized peptide derived from the Internal region of human REP-2

Form:

How to use:1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution:PBS (pH7.4) containing 1% BSA

Application:This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
