

Anti-Human/Monkey RPL10L Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA05753

3th Edition

Description: This gene encodes a protein sharing sequence similarity with ribosomal protein L10. It is not currently known whether the encoded protein is a functional ribosomal protein or whether it has evolved a function that is independent of the ribosome. This gene is intronless. RPL10L (Ribosomal Protein L10 Like) is a Protein Coding gene. Among its related pathways are Viral mRNA Translation and rRNA processing in the nucleus and cytosol. GO annotations related to this gene include structural constituent of ribosome. An important paralog of this gene is RPL10.

Antigen: Synthesized peptide derived from the C-terminal region of human Ribosomal Protein L10L

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity: Testis specific.
