Polyclonal Antibody

Cat.NO.: PA08108

3th Edition

Description: This gene encodes an ADAM family member that cleaves many proteins including TNF-alpha and E-cadherin. Members of the ADAM family are cell surface proteins with a unique structure possessing both potential adhesion and protease domains. Sheddase, a generic name for the ADAM metalloproteinase, functions primarily to cleave membrane proteins at the cellular surface. Once cleaved, the sheddases release soluble ectodomains with an altered location and function.
