

Anti-Human ROBO4 Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA10440

3th Edition

Description:Robo4 (roundabout homolog 4 or magic roundabout) is a receptor for Slit proteins which implicate in angiogenesis and vascular patterning especially through facilitating inhibition of primary endothelial cell migration. It is a fairly recently identified member of Robo family and is shorter than other Robo members at both intracellular as well as extracellular domains. Robo4 plays important roles in several aspects of vascular development such as the guidance of endothelial cell migration, cell cycle regulation, inhibition of pathologic angiogenesis and endothelial hyperpermeability etc. Employing mouse and zebrafish models, Slit2/Robo4 interactions have been shown to maintain integrity of vascular network and its barrier function by inhibiting cytokine-mediated vasculogenesis with enhanced permeability, and that Slit2-Robo4-paxillin-GIT1 network inhibits neovascularization and vascular leakage. Moreover, single nucleotide polymorphism of Robo4 has been documented to be associated with autism suggesting its role in development and function of human brain.

Antigen:Recombinant protein of human ROBO4

Form:

How to use:1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution:PBS (pH7.4) containing 1% BSA

Application:This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:Specifically expressed in endothelial cells. Expressed at sites of angiogenesis in different tumor types.1
