

Anti-Human/Mouse AKAP8L Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA10886

3th Edition

Description:A-kinase anchor protein 8-like is an enzyme that in humans is encoded by the AKAP8L gene. AKAP8L has been shown to interact with Thymopoietin[4][5] and DHX9. Could play a role in constitutive transport element (CTE)-mediated gene expression. Does not seem to be implicated in the binding of regulatory subunit II of PKA. May be involved in nuclear envelope breakdown and chromatin condensation. May regulate the initiation phase of DNA replication when associated with TMPO-beta.

Antigen:Synthetic peptide of human AKAP8L

Form:

How to use:1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution:PBS (pH7.4) containing 1% BSA

Application:This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:Ubiquitously expressed. Expressed in the brain cortex (at protein level).
