

Anti-Human CD107b Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA12004

3th Edition

Description:The protein encoded by this gene is a member of a family of membrane glycoproteins. This glycoprotein provides selectins with carbohydrate ligands. It may play a role in tumor cell metastasis. It may also function in the protection, maintenance, and adhesion of the lysosome. Alternative splicing of this gene results in multiple transcript variants encoding distinct proteins.
