Cat.NO.: TP02116

3th Edition

Synonyms:Fibroblast growth factor 10, Keratinocyte growth factor 2.

Description:FGF10, also known as fibroblast growth factor 10, exhibits mitogenic activity for keratinizing epidermal cells, but essentially no activity for fibroblasts, which is similar to the biological activity of FGF7. Studies of the mouse homolog of suggested that this gene is required for embryonic epidermal morphogenesis including brain development, lung morphogenesis, and initiation of lim bud formation.
