

Galectin-1, 1-135 aa, Human, Recombinant, E.coli

Cat.NO.: TP02186

3th Edition

Synonyms: GAL1, GBP, LGALS1, S-Lac lectin1, galaptin, lactose-binding lectin 1

Description: Galectin-1 is a member of the beta-galactoside-binding proteins implicated in modulating cell-cell and cell-matrix interactions. This protein is an autocrine negative growth factor that regulates cell proliferation. It controls cell survival by inducing apoptosis of activated T cells and immature thymocytes, thus Galectin-1 has immunosuppressive and anti-inflammatory properties.
