Cat.NO.: TP02407

3th Edition

Synonyms:Hemoglobin subunit alpha, nucleophosmin/nucleoplasmin 2.

Description:Hemoglobin subunit alpha, also known as HBA2, belongs to the globin family. HBA2 is involved in oxygen transport from the lung to the various peripheral tissues. The alpha-2(HBA2) and alpha-1 (HBA1) coding sequences are identical. These genes differ slightly over the 5' untranslated regions and the introns, but they differ significantly over the 3' untranslated regions.
