

**HCV NS3, 1225-1456aa, HCV, His tag, E.coli**

**Cat.NO.: TP02415**

3th Edition

**Synonyms:**NS3 protease/helicase

**Description:**HCV is a positive, single-stranded RNA virus in the Flaviviridae family. The polyprotein is processed by host cell and viral proteases into three major structural proteins including NS3, and several non-structural proteins necessary for viral replication. Nonstructural (NS) proteins of HCV play major roles in viral replication and the pathogenesis of liver diseases. The NS3 protein of hepatitis C virus (HCV) contains protease and RNA helicase activities, both of which are likely to be essential for HCV propagation.
