

IL6, 21-207aa, Canine, His-tag, Baculovirus

Cat.NO.: TP02646

3th Edition

Synonyms:Interleukin-6, IL6, IL-6

Description:IL6, as known as Interleukin-6, is a phosphorylated and variably glycosylated cytokine. It is secreted by T cells and macrophages to stimulate immune response during infection and after trauma, especially burns or other tissue damage leading to inflammation. Also, this protein can function as an anti-inflammatory molecule, as in skeletal muscle where it is secreted in response to exercise. Recombinant canine IL6, fused to His-tag at C-terminus, was expressed in insect cell and purified by using conventional chromatography techniques.

Form:Liquid. In Phosphate Buffered Saline (pH 7.4) containing 10% glycerol.

Molecular Weight:22.0kDa (195aa)18-28kDa (SDS-PAGE under reducing conditions.)
