

Interferon α -2b (24-188) Human, Recombinant, E.coli

Cat.NO.: TP02669

3th Edition

Synonyms:IFNA, INFA2

Description:Interferon induces a variety of effects on target cells including antiviral, antiproliferative, and immunomodulatory activities. Interferon α -2b can either inhibit or enhance immune cell activity within the tightly regulated microenvironment of inflammation, depending upon the concentration of the cytokine and the activation stage of the cell. Interferon α -2b was expressed in E.coli and purified by conventional chromatography, after refolding of the isolated inclusion bodies in a renaturation buffer.

Form:Liquid. In phosphate-buffered Saline(pH 7.4)

Molecular Weight:19.4kDa (166aa), confirmed by MALDI-TOF
