

IRF1, 1-114aa Human, His-tagged, Recombinant, E.coli

Cat.NO.: TP02686

3th Edition

Synonyms: Interferon regulatory factor-1

Description: IRF1, Interferon regulatory factor 1, is a member of the interferon regulatory transcription factor (IRF) family which regulates gene expression critical to immune response, hematopoiesis and proliferation. IRF-1 is a transcriptional activator for IFN- α , IFN- β , and IFN- γ stimulated genes. IRF1 is also a tumor suppressor transcription factor inducing apoptosis of tumorigenic cell lines. Recombinant human IRF1 was expressed in E.coli and purified by using conventional chromatography techniques.
