

KLK11, 54-278aa, Human, E.coli

Cat.NO.: TP02741

3th Edition

Synonyms:Kallikrein 11, PRSS20, TLSP

Description:Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. Alternate splicing of this gene results in multiple transcript variants encoding distinct isoforms which are differentially expressed. Recombinant human KLK11 protein was expressed in E.coli.
