

NCF4, 1-339 aa, Human, His tag, E.coli**Cat.NO.: TP03106**

3th Edition**Synonyms:** Neutrophil cytosol factor 4, NCF, P40PHOX, SH3PXD4.**Description:** NCF4 is a cytosolic regulatory of the superoxide-producing phagocyte NADPH-oxidase, a multicomponent enzyme system important for host defense. This protein is preferentially expressed in cells of myeloid lineage. It interacts primarily with neutrophil cytosolic factor 2 (NCF2/p67-phox) to form a complex with neutrophil cytosolic factor (NCF1/p47-phox), which further interacts with the small G protein RAC1 and translocates to the membrane upon cell stimulation.**Form:** Liquid. In 20mM Tris-HCl buffer (pH 8.0) containing 0.1M NaCl, 10% glycerol, 1mM DTT**Molecular Weight:** 41.1 kDa (359aa) confirmed by MALDI-TOF**Sequences:**
